Summary

I am an experienced developer with a strong background in React, having honed my skills over the course of three years. My expertise lies in leveraging the power of React to create robust and dynamic web applications. In addition to React, I also have a solid foundation in competitive programming, where I have worked extensively with C++. This combination of skills allows me to approach software development with versatility and a comprehensive understanding of different programming languages.

Experiences

Front-end Developer
Ephorize
Remote
September 2022 / June 2023

Worked on making UIs for GTA V server in React, mainly worker per project.

Flower Ecommerce
OnlinePokloni
Tuzla
March 2023 / May 2023

Worked on making profesional web shop, with dashboard and integration of payment processor.

Algorithms Visualization
Personal Project
Tuzla
July 2022 / August 2022

One of my notable projects involved creating a visualization tool for algorithms, specifically focusing on pathfinding using the Depth-First Search (DFS) algorithm. The application allowed users to visualize the exploration process and observe the pathfinding algorithm in action. Additionally, I implemented visualization for sorting algorithms such as Bubble Sort and Selection Sort, enabling users to understand and analyze the sorting process step by step.

Education

Gimnazija
